Water and Wastewater

Our Water and Wastewater division has developed longstanding relationships with utility suppliers by consistently delivering on their most challenging projects. Working across the water, wastewater and network distribution sectors, we draw on our 40-year history of designing and delivering complex solutions to ensure our clients meet their regulatory drivers.

Our capability is built on analysing our clients' requirements to provide a full design, build and commissioning service. Our experience incorporates new build, refurbishment, modification and decommissioning works, with a detailed understanding of the relevant disciplines of civil, structural, process and MEICA.

We undertake minor repairs and upgrades through to major capital projects, with our portfolio of works including:

- **New build non-infrastructure works** such as Water and Wastewater treatment works upgrades and modifications
- **Distribution Network** construction, maintenance and remedial works
- **Tunnelling and shaft construction**
- **Infrastructure works** such as trunk mains, rising mains, sewer replacements, CSO's and storm attenuation.

We have significant experience and capability in concrete structures, with a focus on the precast construction of tanks and water retaining structures. We have strong links with our Reinforced Concrete Structures Division, enabling us to draw on the skills and expertise of the wider Westshield business.

You can read more about our reinforced concrete structures division [here](#).

Our reinforced concrete capability is further expanded by our service yard at Bredbury, which is home to a comprehensive range of company owned proprietary formwork and falsework. The yard provides enormous opportunity for offsite manufacture, with an under-cover workshop with a 30t gantry crane and over two acres of hard standing.
