About Drainage Consultants

Our drainage division specialises in all aspects of drainage work. Carefully selected and fully trained, our NRSWA (New Road & Street Works Act 1991), and Confined Space accredited supervisors and engineers allow us to repair, replace and maintain pipework in the public highway in accordance with Health and Safety Regulations and Local Authorities Regulations.

Where a “no dig” situation occurs, a plan of action is formed after full analysis of the situation and the following activities are usually part of the solution that is carried out to resolve the problem:

- Moling
- Drain & sewer re-lining
- Lateral cutting and pipe bursting
- Deep excavation and repairs

Just Give Us A Call on **08000 654 111**

To see what we can do for you call our specialist team for an initial assessment.
Phone or contact us online and we reply within 24 hours for an initial
consultation with a fully accredited engineer.

Thorough Drain Investigation

We utilise precise sonar drain tracing to pinpoint the location of any defects and identify future issues. Our cameras can survey bore pipes ranging from 50mm to 900 diameters depending on the individual need.

Our Professional survey teams carry out investigation work including:

Expert Drainage Engineers

Our teams are experienced surveying on airports, housing estates, construction sites, industrial parks and retail parks. We understand the challenges your business faces.

- CCTV Surveys
- Sonar sewer and drain tracing
- Dye testing
- Water testing
- Trial holes
- Drain cleaning using high pressure water jetting and descaling followed by a full report with recommendations

Precise Integral Reports & Schematic Plans

Our reports provide essential information written in plain English with as little industry jargon as possible.

After we've been on site surveying the pipework accessible from manholes, gullies and access points, a report is compiled detailing:

- **The location of drainage runs**

-
- **The internal condition of the pipework**
-
- **The internal sizes of the pipework**
-
- **Pipework materials**
-
- **Hidden connections**

- **Pipework defects**

A schematic plan of the drainage system is included within the report. Any defects identified are highlighted and recommendations to repair are proposed with associated costs.

Manhole survey sheets will be completed and an internal photograph included for each manhole within the area surveyed. Manhole reference numbers will correspond to those given on the video and the following information will be provided:

-
- **Invert depths from the cover to each pipe entering or leaving the manhole.**
-
- **Pipe diameters for all pipes entering or leaving the manhole.**
-
- **A condition survey of the manhole including benching and the cover and/or frame.**

- **A drawing of the manhole detailing all connection points and their orientation to the main outfall including flow arrow.**

Hard copies of both the survey condition report and the manhole survey sheet will be provided with a DVD containing the survey footage.

Industrial Drainage Services

Here at Drainage Consultants we provide drainage services to a variety of Commercial and Industrial clients nationwide. Our commercial clients range from Building and Construction firms, Facilities and Property Management Companies, Airports, Public House chains, Housing Associations, Local Authorities, Water Companies, Supermarket chains, Structural Engineers and Surveyors to name but a few.

We carry out a large range of these [commercial drain services](#), including:

- Time sensitive work such as drain unblocking and emergency repairs/replacement
- CCTV Drain Surveys and investigation work to analyse the situations of drainage systems on industrial and commercial sites (which leads to a comprehensive report and recommendations for improving and keeping all drainage systems functional)
- Maintenance and rehabilitation work to keep your business operational and reduce likelihood of emergency requirements
- New drainage and sewer systems
- Pump Station Maintenance

Whilst we undertake a significant amount of work on domestic properties for insurance companies and housing our teams are mostly focused nationwide on industrial and commercial projects.

If you have a requirement for a reliable and trusted drainage contractor please investigate the services detailed on this page and give us a call for a free assessment and quotation.
